

September 1, 2019

We wanted to take this opportunity to communicate with you the appropriate licenses and traits to eliminate some of the confusion that we experienced last year. Below is a listing of various traits, and the companies that require the correct licenses for their use.

As a reminder, it is a requirement of the US EPA to correctly license growers for the use of these traits. Failure to do so in violation of federal law and the terms of the agreements that we hold with the technology companies.

If you have further questions regarding licensing, contact your Seed Specialist, view www.agcelerate.com, or contact Beth Isom at the ProHarvest Seeds office.

Bayer (Monsanto)

SmartStaxRIB Corn
VT3ProRIB Corn
VT3Pro Corn
